DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 27-36 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation "said closed position" in line 8. There is insufficient antecedent basis for this limitation in the claim.

Also, in line 7, the word "conduit" should be "conduits".

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 27, 28, 31, and 34-36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jorgensen (WO 94 02195) in view of Campbell et al (US 4,036,210).

Jorgensen teaches all the claimed subject matter including a spring-loaded (14) pressure release valve piston (16), but does not teach dual lumens governed by the same transverse valve.

Campbell teaches a dual lumen device wherein the lumens are opened and

closed with the same transverse slide valve. It would have been obvious to one of ordinary skill in the art to form the device of Jorgensen with dual lumens as taught by Campbell since duplication of the essential working elements of a device is routine in the art.

Further, Jorgensen does not explicitly teach the valve assembly being releasably connectable to a catheter extension. Jorgensen teaches a slightly different embodiment in figure 2a that shows a releasable connection. Since it would require only routine skill in the art, it would have been obvious to one of ordinary skill in the art to form the device of figure 1a with the releasable catheter structure of figure 2a in order to allow the connection of differently sized catheters onto to the valve assembly.

Allowable Subject Matter

Claims 29, 30, 32, and 33 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Allowable subject matter includes the valve piston being magnetically biased, and the piston being narrower in the middle than at each end such that one end covers the opening in the closed position.
